

For certain patients with cancer of the tube that connects your throat to your stomach (esophageal cancer)

# Reimagine tomorrow with ETAPIDI

**A treatment that is designed to work with your immune system and help you live longer** received ETAPIDI + chemotherapy and whose tumor tested positive for the biomarker PD-L1 lived longer than those who received placebo + chemotherapy

## FDA-Approved Indication

ETAPIDI is a prescription medicine used to treat adults with:

- cancer of the tube that connects your throat to your stomach (esophageal cancer)
- ETAPIDI may be used in combination with chemotherapy that contains platinum as your first treatment when your esophageal cancer:
  - is a type called squamous cell carcinoma, **and**
  - cannot be removed with surgery or has spread to other parts of the body (metastatic), **and**
  - your tumor tests positive for “PD-L1.”

It is not known if ETAPIDI is safe and effective in children.

## Important Safety Information

ETAPIDI is a medicine that may treat certain cancers by working with your immune system. ETAPIDI can cause your immune system to attack normal organs and tissues in any area of your body and can affect the way they work. These problems can sometimes become severe or life-threatening and can lead to death. You can have more than one of these problems at the same time. These problems may happen anytime during treatment or even after your treatment has ended.

If you have been diagnosed with ESCC, or if you are caring for someone who has, you may feel eager to find out what the next steps are

**Now that your doctor has prescribed ETAPIDI, the goal of this guide is to empower and prepare you for treatment.**

**In this guide, you will find useful information about:**

- What ESCC is
- What to expect with ETAPIDI and how to prepare for treatment
- The importance of tracking how you feel
- Resources available to you

**For caregivers:** This guide includes recommendations on how to provide medical, practical, and emotional support for both your loved one and yourself throughout the treatment experience. Look for tips like this throughout the brochure

## **Important Safety Information (cont'd)**

Call or see your healthcare provider right away for new or worsening symptoms, including:

**Lung problems:** New or worsening cough, shortness of breath, chest pain.

**Intestinal problems:** Diarrhea (loose stools) or more bowel movements than usual; stools that are black, tarry, sticky, or have blood or mucus; severe stomach-area (abdomen) pain or tenderness

**etapidi**  
Tislelizumab 100mg

# What is ESCC?

**ESCC stands for esophageal squamous cell carcinoma, a cancer that affects the esophagus, the tube connecting the throat and stomach.**

It starts when normal cells in the lining of the upper and middle parts of the esophagus become cancerous and begin to grow and spread.

**You are not alone.**

The National Cancer Institute estimates that about 22,000 people are diagnosed with esophageal cancer each year. Approximately 1 in 3 of these cases is ESCC.

**Treatments are available that can help you live longer.**

Continue reading this guide to learn more about ETAPIDI, the treatment that you and your doctor decided is best for you.

## **Important Safety Information (cont'd)**

Call or see your healthcare provider right away for new or worsening symptoms, including:

**Liver problems:** Yellowing of your skin or the whites of your eyes, severe nausea or vomiting, pain on the right side of your stomach area (abdomen), dark urine (tea colored), bleeding or bruising more easily than normal.

# ETAPIDI is a proven and effective type of infusion treatment known as immunotherapy

## What is an infusion?

It is a very common treatment method for people with various health challenges. You may receive your ETAPIDI infusions at your doctor's office, an infusion center, or another healthcare location.

## What is immunotherapy?

Immunotherapy is a type of treatment that is designed to work with your own immune system to find and destroy cancer cells. It helps boost your immune cells, such as T cells,\* to attack growing cancer cells. It is a different type of treatment than chemotherapy, which can rapidly target growing cells in the body.

Often, immunotherapy and chemotherapy treatments can be partnered together to give your body the extra help it needs.

\*T cells, or T lymphocytes, are a type of white blood cell.

## Important Safety Information (cont'd)

Call or see your healthcare provider right away for new or worsening symptoms, including:

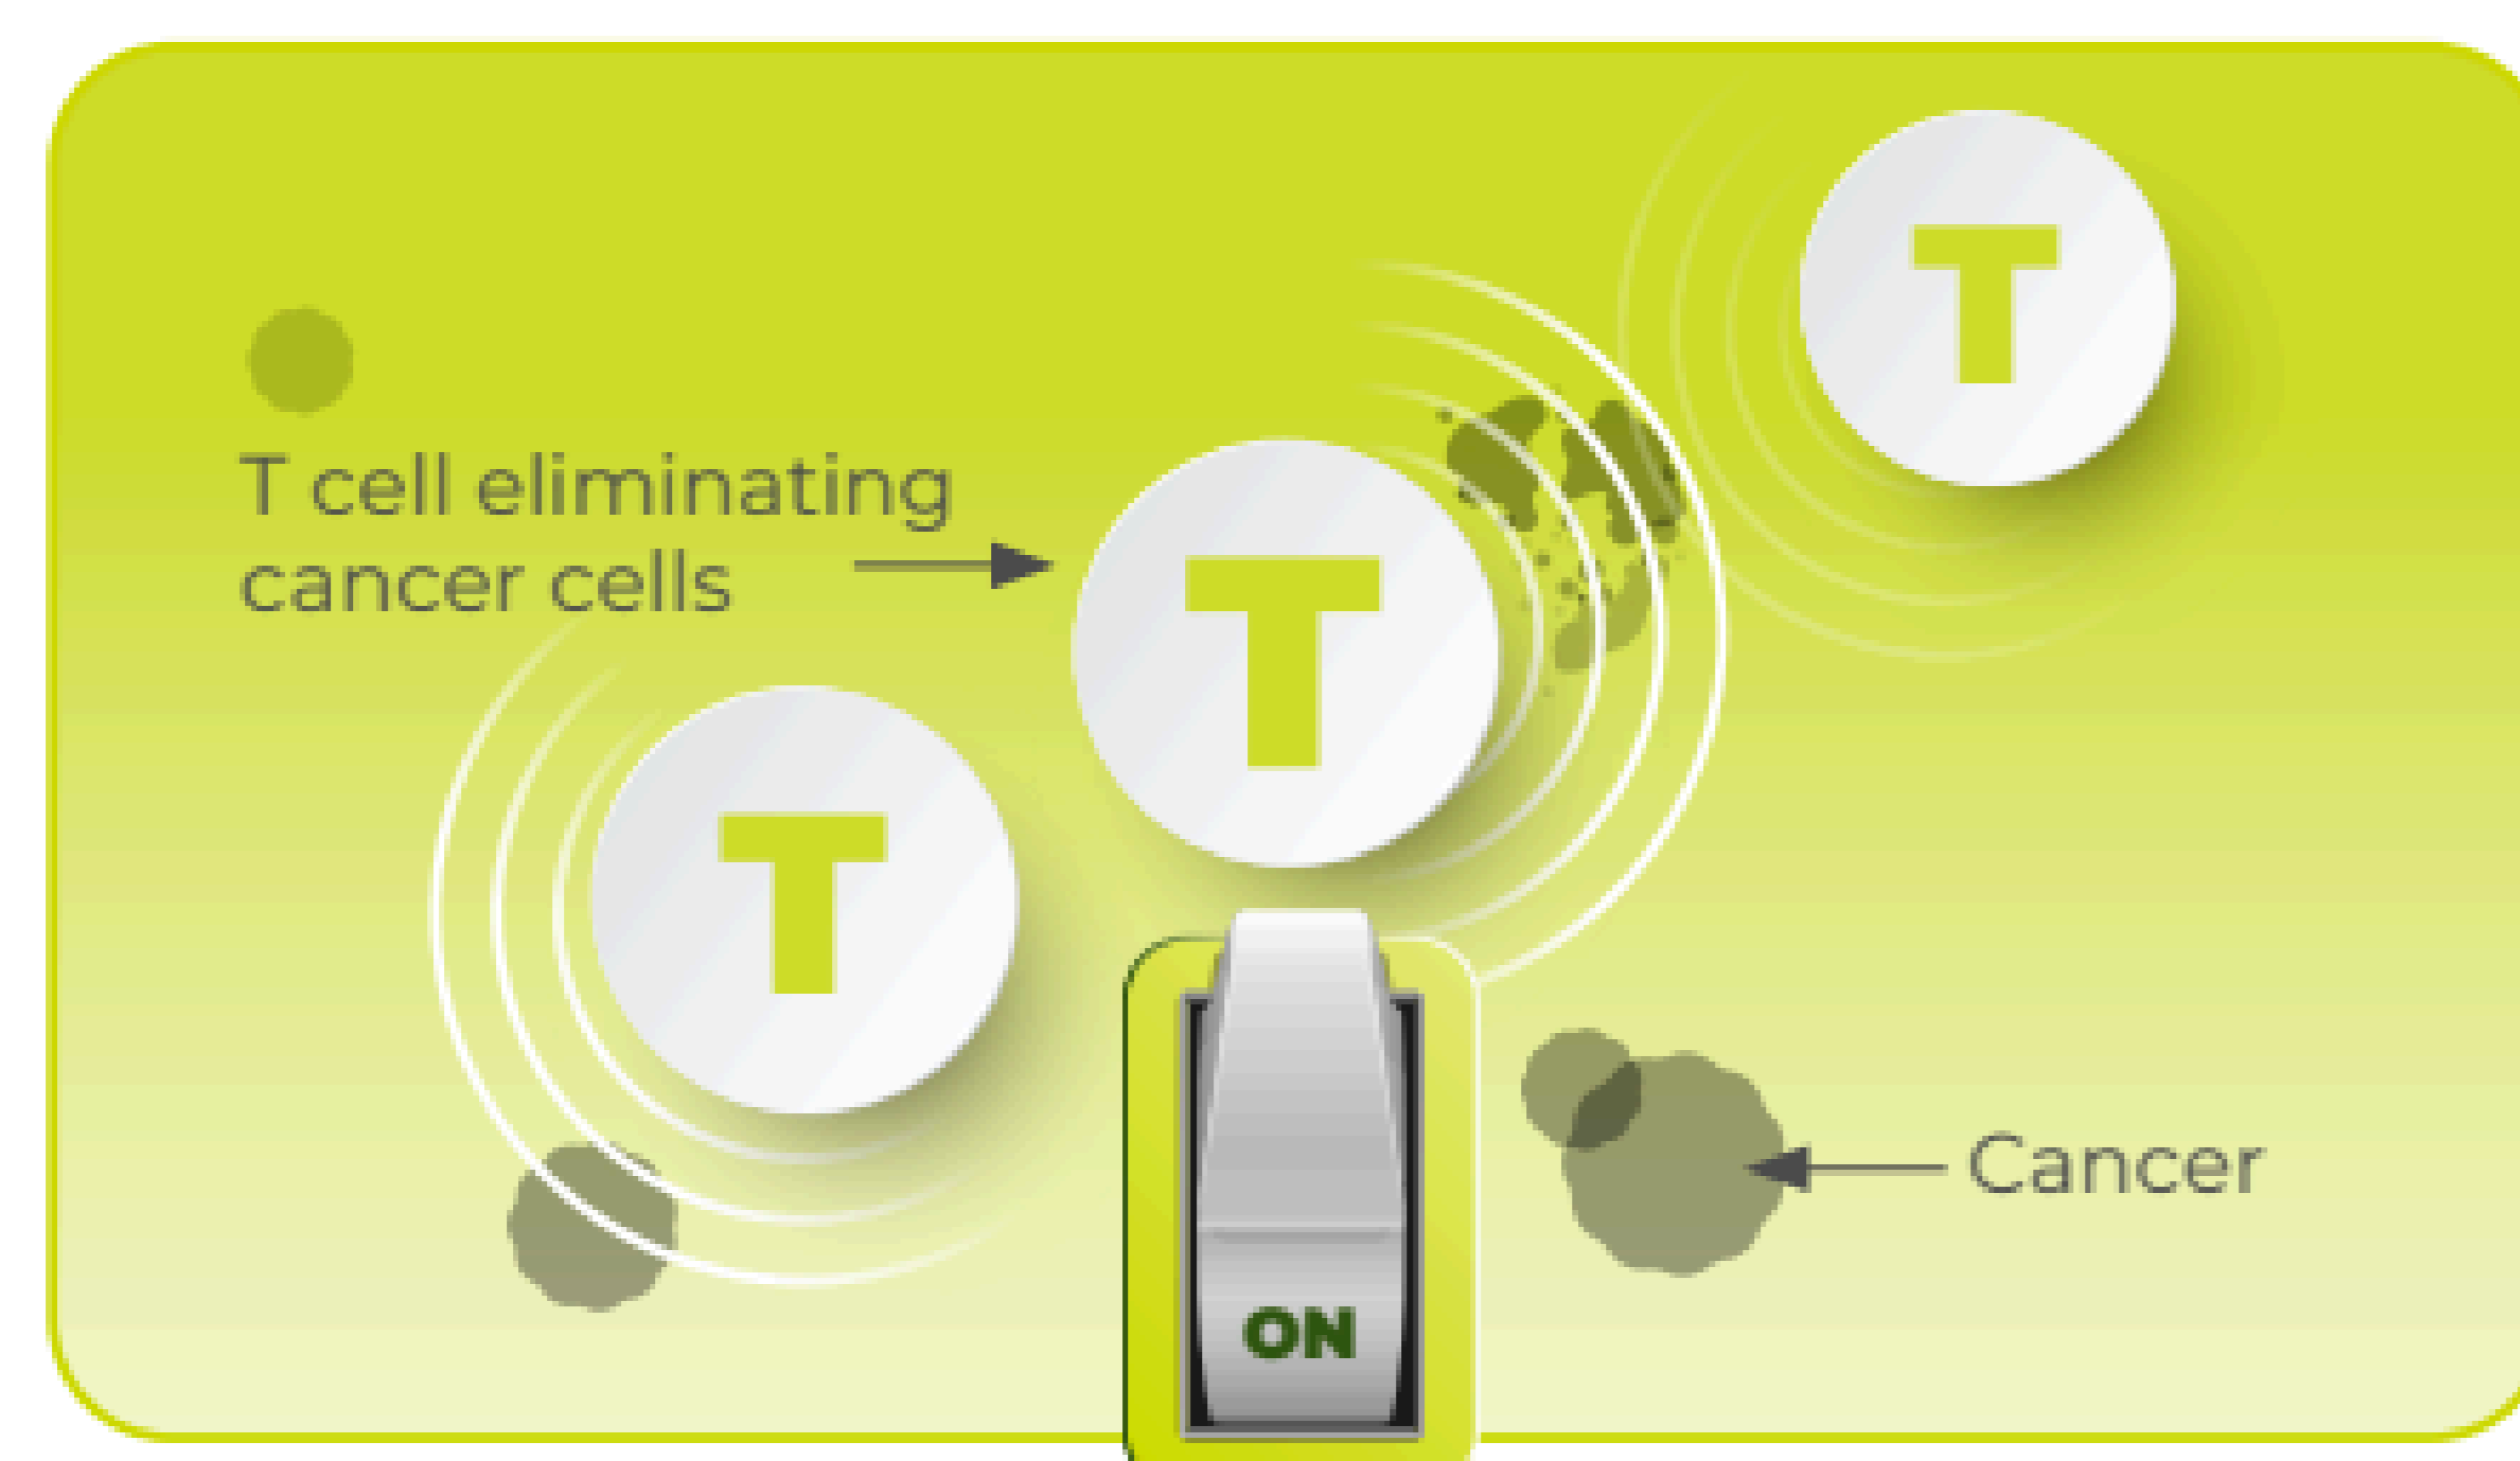

**Hormone gland problems:** Headaches that will not go away or unusual headaches; eye sensitivity to light; eye problems; rapid heartbeat; increased sweating; extreme tiredness; weight gain or weight loss; feeling more hungry or thirsty than usual; urinating more often than usual; hair loss; feeling cold; constipation; your voice gets deeper; dizziness or fainting; changes in mood or behavior, such as decreased sex drive, irritability, or forgetfulness.

**In a healthy immune system, T cells are “switched on”**

The T cells are active, travelling through your body, looking for and eliminating disease and infection

**In the immune system of someone with cancer, many T cells are “switched off”**

Cancer can “flip a switch” to turn off T cells, preventing them from finding and eliminating the cancer cells

**In the immune system of someone receiving ETAPIDI treatment, T cells are “switched back on” to fight cancer**

ETAPIDI attaches to T cells, keeping the “switch” on, so T cells can find and eliminate the cancer cells

**ETAPIDI has been shown to work in people who have tested positive for the PD-L1 biomarker. Levels of PD-L1 vary from person to person. If you are receiving ETAPIDI, your doctor likely has found that certain cells in your tumor show PD-L1.**

## **Important Safety Information (cont'd)**

Call or see your healthcare provider right away for new or worsening symptoms, including:

**Kidney problems:** Decrease in your amount of urine, blood in your urine, swelling in your ankles, loss of appetite

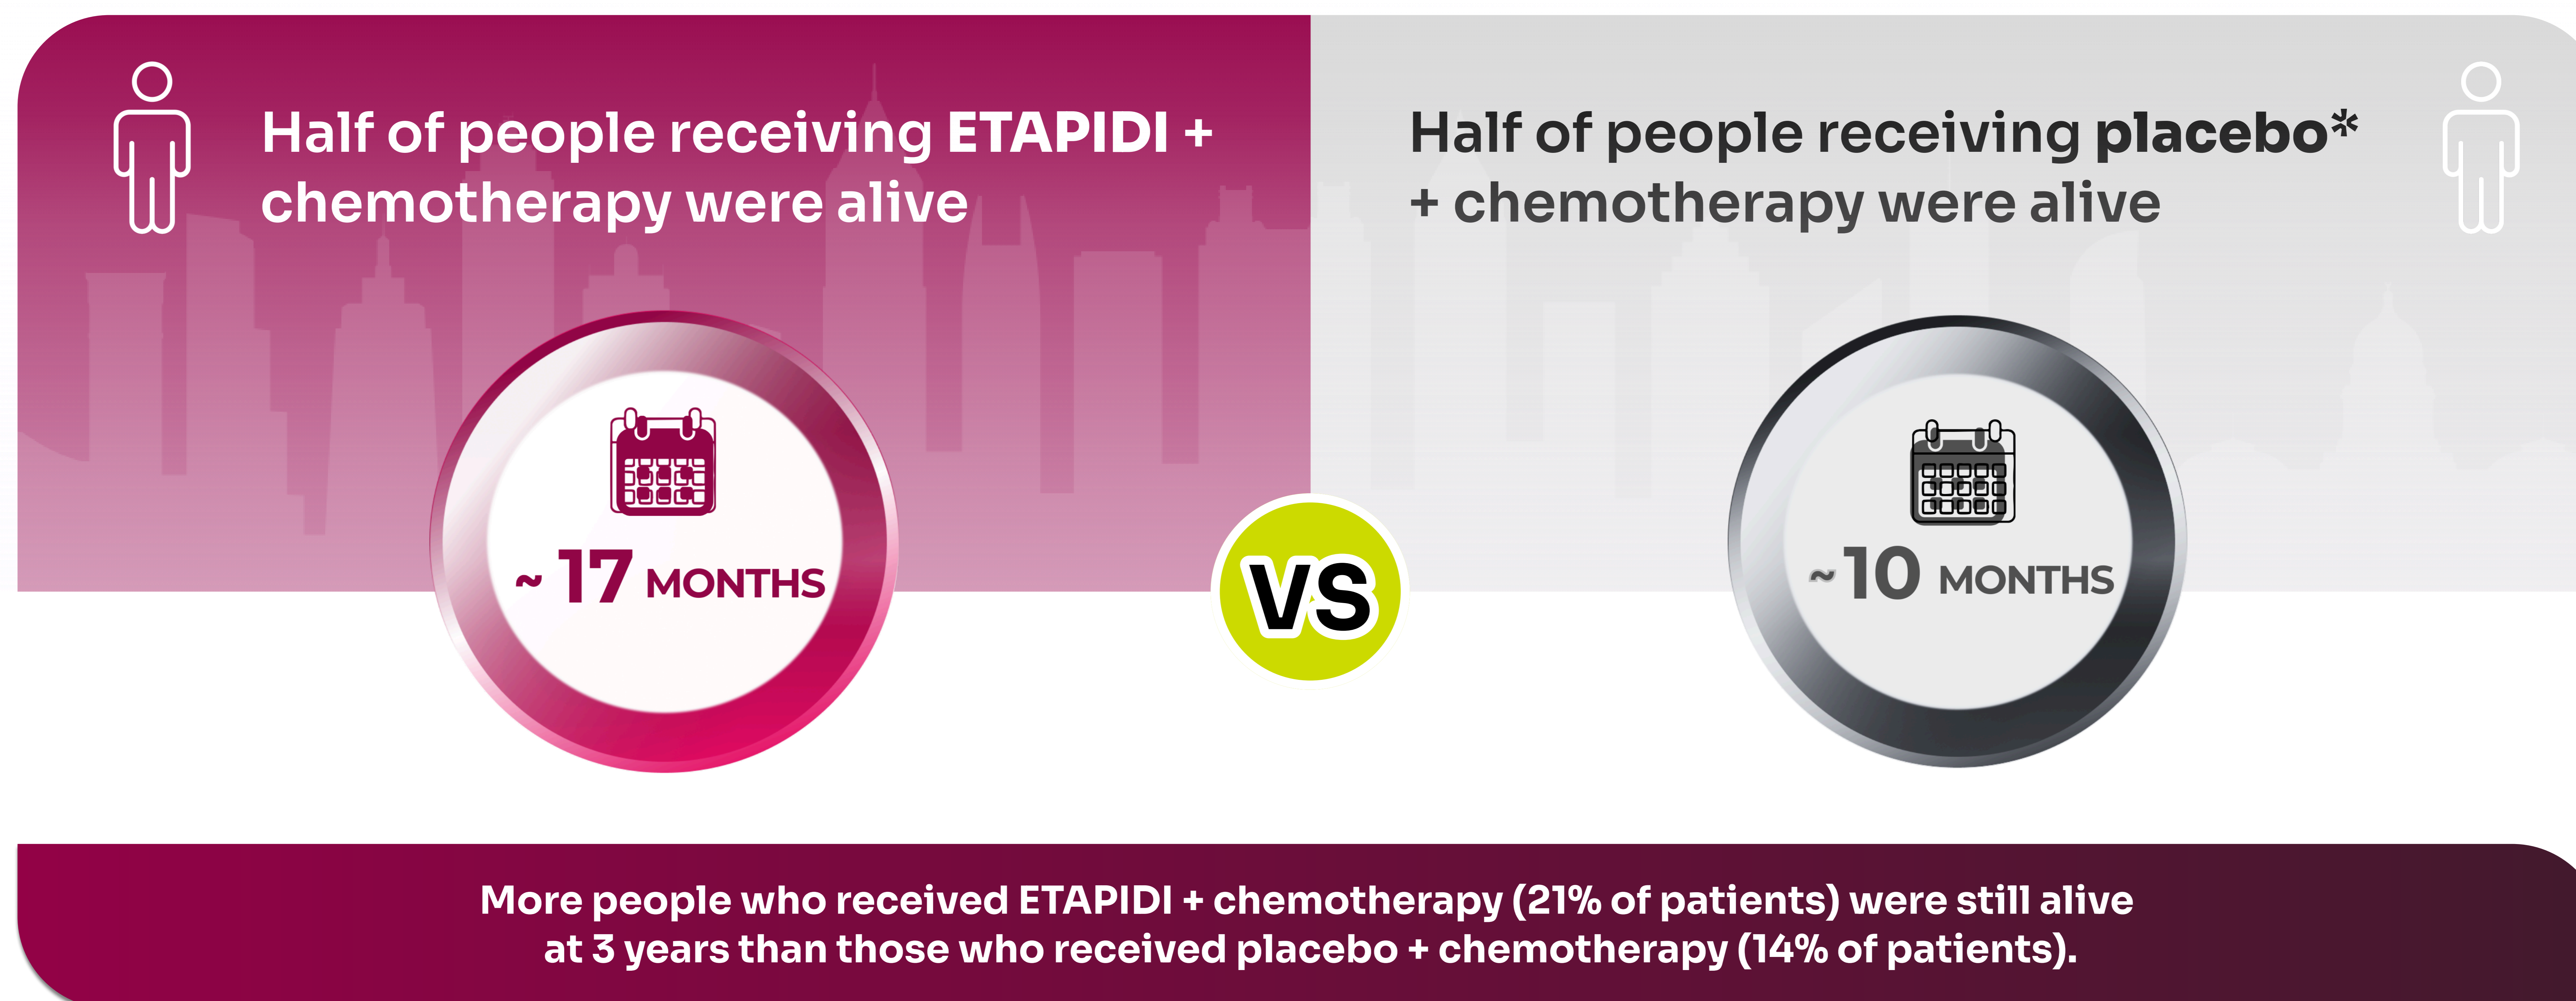

# ETAPIDI can help people with ESCC live longer

**etapidi**  
Tislelizumab 100mg

ETAPIDI + chemotherapy was studied in a clinical trial of 649 people who had ESCC. Of these, 481 patients had a PD-L1 score  $\geq 1\%$ , like you. Those included in the trial:

- Had cancer that had spread
- Could not have their cancer removed with surgery
- Had not received treatment for this stage of their cancer

**With ETAPIDI + chemotherapy, people typically lived longer:**

\*Placebo is an inactive treatment used to compare with active treatments.

## Important Safety Information (cont'd)

Call or see your healthcare provider right away for new or worsening symptoms, including:

**Skin problems:** Rash; itching; skin blistering or peeling; painful sores or ulcers in your mouth or in your nose, throat, or genital area; fever or flu-like symptoms; swollen lymph nodes.

# ETAPIDI can help more people with ESCC see their tumor shrink

**etapidi**  
Tislelizumab 100mg

With ETAPIDI + chemotherapy, more people responded to treatment, † or saw their tumor shrink:

\*Placebo is an inactive treatment used to compare with active treatments.

## Important Safety Information (cont'd)

Call or see your healthcare provider right away for new or worsening symptoms, including:

**Problems can also happen in other organs and tissues.** These are not all of the signs and symptoms of immune system problems that can happen with ETAPIDI. Call or see your healthcare provider right away for new or worsening symptoms, which may include: chest pain, irregular heartbeat, shortness of breath, swelling of ankles; confusion, sleepiness, memory problems, changes in mood or behavior, stiff neck, balance problems, tingling or numbness of the arms or legs; double vision, blurry vision, sensitivity to light, eye pain, changes in eyesight; persistent or severe muscle pain or weakness, muscle cramps; low red blood cells, bruising.
